

Installation Guide

Project: Smart Course Companion

Course: SOEN 287 – Web Programming

Team: TeamA

Overview

This document explains how to run the Smart Course Companion website locally on a computer.

For Deliverable 1, the project consists only of frontend files (HTML, CSS, and JavaScript) and does not require any server or database installation.

Prerequisites

To run this project, the following software is required:

- A modern web browser:
 - Google Chrome (recommended)
 - Mozilla Firefox
 - Microsoft Edge
 - Safari

No additional software or dependencies are required for Deliverable 1.

Download the Project

1. Download the compressed project file submitted on Moodle.
2. Save the file to your computer.

Extract the Files

1. Locate the downloaded .zip file.
2. Right click on the file.
3. Select Extract All (Windows) or Unzip (Mac).
4. A folder containing the project files will be created.

Running the Website

1. Open the extracted project folder.
2. Locate the file named: home-page.html
3. Double click the file.

The website will automatically open in your default web browser.

Navigating the Website

Once the website is open in the browser, users can navigate through the system using the navigation menu and links provided in the interface.

For example:

- Login page
- Sign up page
- Student dashboard
- Course and assessment pages
- Admin panel

Notes

- All data used in Deliverable 1 is hard coded for demonstration purposes.
- No backend server or database is required at this stage.
- Backend functionality will be implemented in Deliverable 2 using Node.js.

Troubleshooting

If the website does not open correctly:

- Ensure the .zip file has been fully extracted.
- Verify that the .html files are opened in a modern web browser.
- Try opening the files using Google Chrome if issues occur in another browser.
